CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: July 2012

New Home Market

Housing Starts Up in June

Total housing starts in the Edmonton Census Metropolitan Area (CMA) increased in June to 1,050 units, up 46 per cent from the corresponding levels in June 2011. For the year-to-date, housing starts of all types totalled 5,468 units, up from 4,051 during the first six months of 2011.

Single-detached housing starts in the Edmonton CMA increased 18 per cent in June to 522 units, up from 443 units a year earlier. Within the City of Edmonton, 259 single-detached units were started, virtually unchanged from the 258 units started in June 2011. On a year-to-date basis, foundations were poured for 2,595 single-detached units in the Edmonton CMA, up 17 per cent from the 2,226 units started in the first half of last year.

Source: CMHC

With the exception of May 2012, single-detached completions continued to move down on a year-over-year basis. There were 426 homes completed in June 2012, a six per cent decrease compared to the same month in 2011. However, completions are expected to post some year-over-year gains later this year as the number of units under construction in June was 12 per cent higher than the previous year. The pace at which single-detached homes were absorbed by the market slowed as well. Single-detached absorptions totalled 416 units in June, down seven per cent from the level in 2011. With completions and absorptions changing at a similar pace, the inventory of complete and unabsorbed single-detached homes remained stable. There were 547 units of inventory in June 2012 compared to the 546 units reported in the same period in 2011. The single-detached inventory in June remained lower than February's peak of 650 units, which represented the highest level in the past three years.

The price of new homes in the Edmonton CMA increased in June 2012. The average price of absorbed single-detached units was \$531,946, an increase of four per cent compared to the same period in 2011. The median price of absorbed single-detached homes in June increased one per cent year-over-year to \$463,600. Data from Statistics Canada's New House Price

Index (NHPI) showed a similar trend. Contractor selling prices reported an increase of one per cent from the previous year in May 2012. A slower growth in both the median price and the NHPI relative to that of the average is due to more higher priced single-detached homes absorbed during this period.

Multi-family starts, which consist of semi-detached units, rows, and apartments, totalled 528 units in the Edmonton CMA in June, compared to 276 units started a year earlier. The majority, at 89 per cent, occurred within the City of Edmonton. Halfway into 2012, multi-family housing starts reached 2,873 units in the Edmonton CMA, compared to 1,825 units started in the first six months of 2011. To the end of June, row starts have more than doubled in the Edmonton CMA, while semi-detached and apartments reported gains of 50 and 49 per cent, respectively.

Completions of multi-family units increased to 579 units in June 2012, up from the 305 units recorded in the same period in 2011. The inventory of

Figure 3

Source: CMHC

multi-family units was down year-over-year for the fifth consecutive month. There were 935 complete and unoccupied units at the end of June, down from 990 in June 2011. A total of 6,464 multi-family units were under construction in June, up 21 per cent from the same period in 2011.

Total new housing supply in the Edmonton CMA moved up for the ninth consecutive month in June. A total of 11,424 units of new supply were recorded in June 2012 compared to the 9,974 units in June 2011, which represents a 15 per cent increase. Total new supply includes the number of complete and unoccupied units as well as those under construction.

Resale Market

Existing home sales and prices move higher

MLS® sales in the Edmonton region continued to move upward during the second quarter of 2012. A total of 5,943 homes exchanged hands from April through June, representing a nearly eight per cent increase from the same period in 2011. Sales rose higher on a year-over-year basis in each month in the second quarter. On a year-to-date basis, MLS® sales

Figure 4

Source: CREA

increased by 7.5 per cent over the first half of 2011, reaching 9,726 transactions.

The number of new MLS® listings in the Edmonton Region remained relatively stable during the second quarter of 2012. There were 10,236 new listings from April to June, compared to the 10,162 recorded in the same quarter of last year. Active listings averaged 8,233 units from April to June of 2012, down slightly from the 8,389 posted in the same period in 2011. With sales increasing and

active listings moving down, the sales-to-active listings ratio moved up to an average of 23 per cent in the second quarter of 2012, bringing the market into balanced territory.

With a higher volume of sales relative to listings, Edmonton's average price in the second quarter of 2012 increased. The average MLS® residential price was \$341,669 during the quarter, up nearly four per cent from the same period in 2011. On a year-to-date basis, the average price increased by three per cent, reaching \$336,890.

Economy

Strong labour market attracts migrants

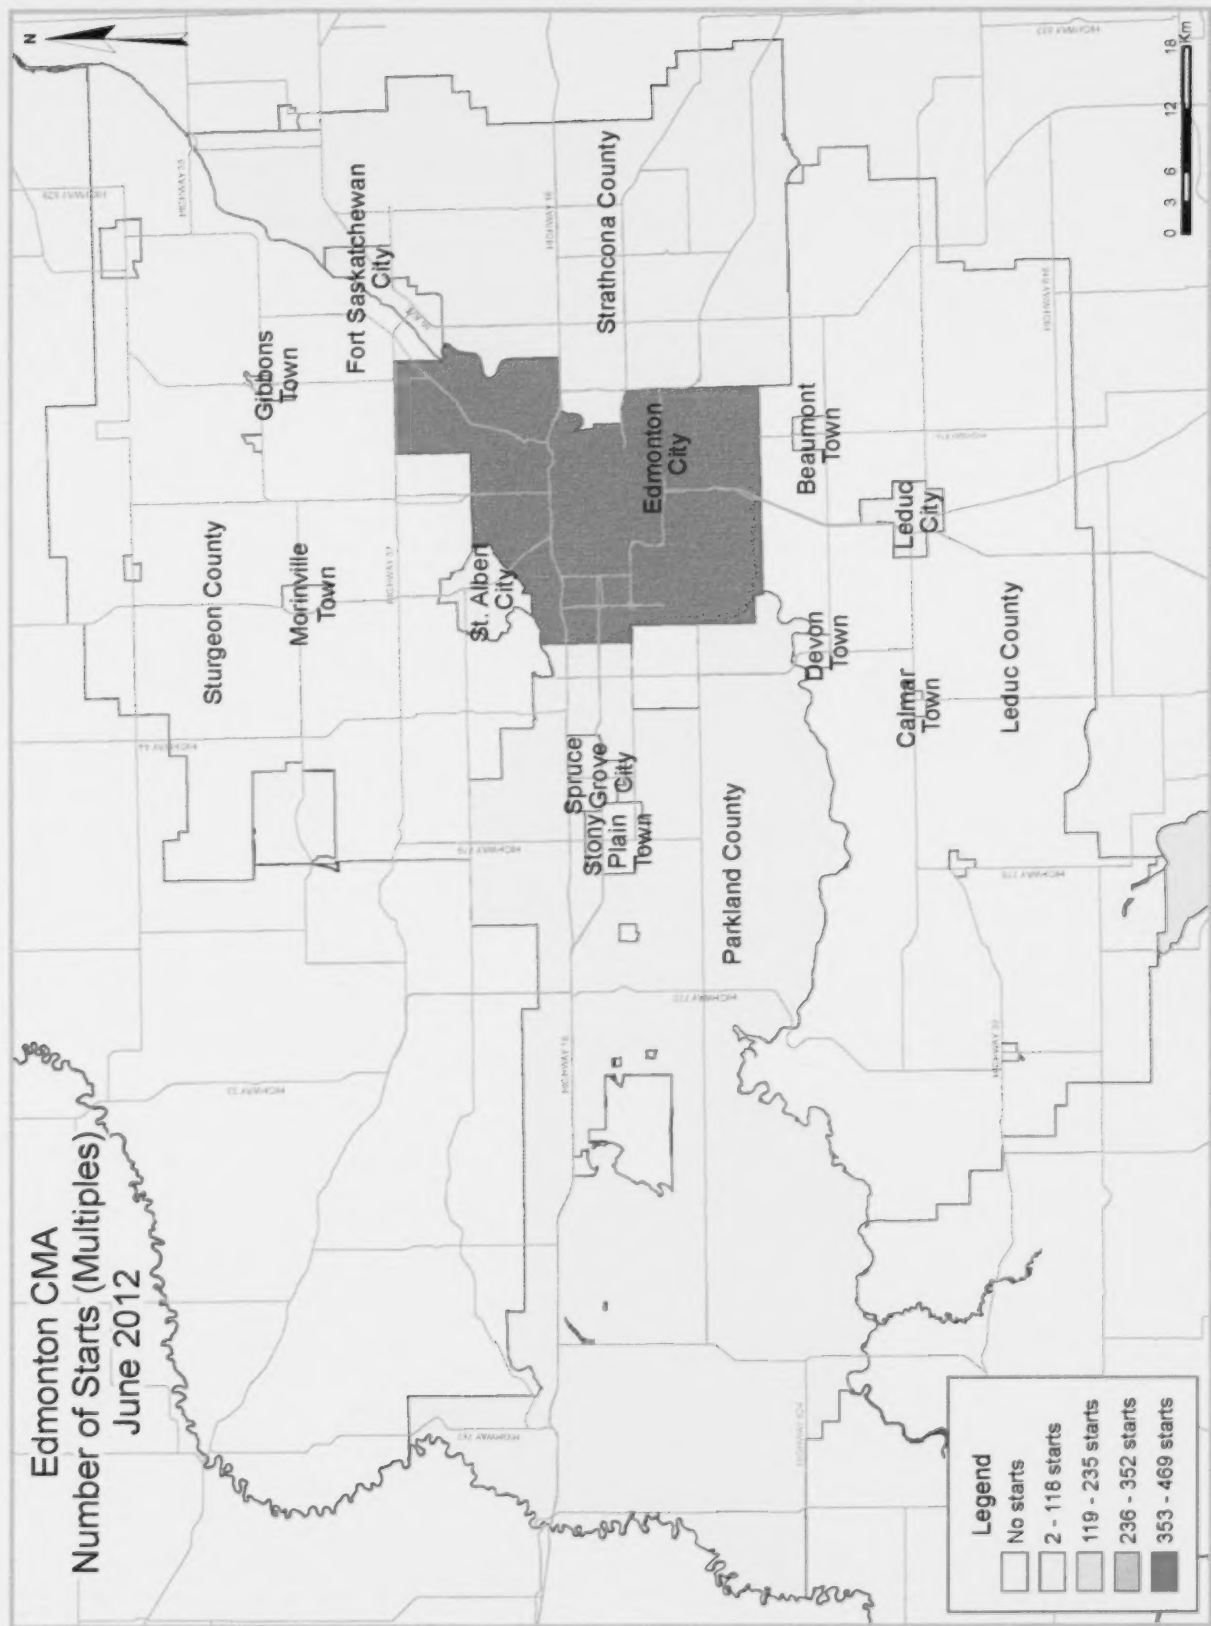

After a pause in the first quarter of 2012, employment growth in the Edmonton CMA picked up again in the second quarter of 2012. Seasonally adjusted employment averaged 691,000 from April to June, up from the 668,300 in the first quarter of 2012. On an unadjusted basis, average employment in the second quarter increased 4.3 per cent, representing the addition of 28,900 jobs. This boost in the employment level can be attributed to both a hike in full-time

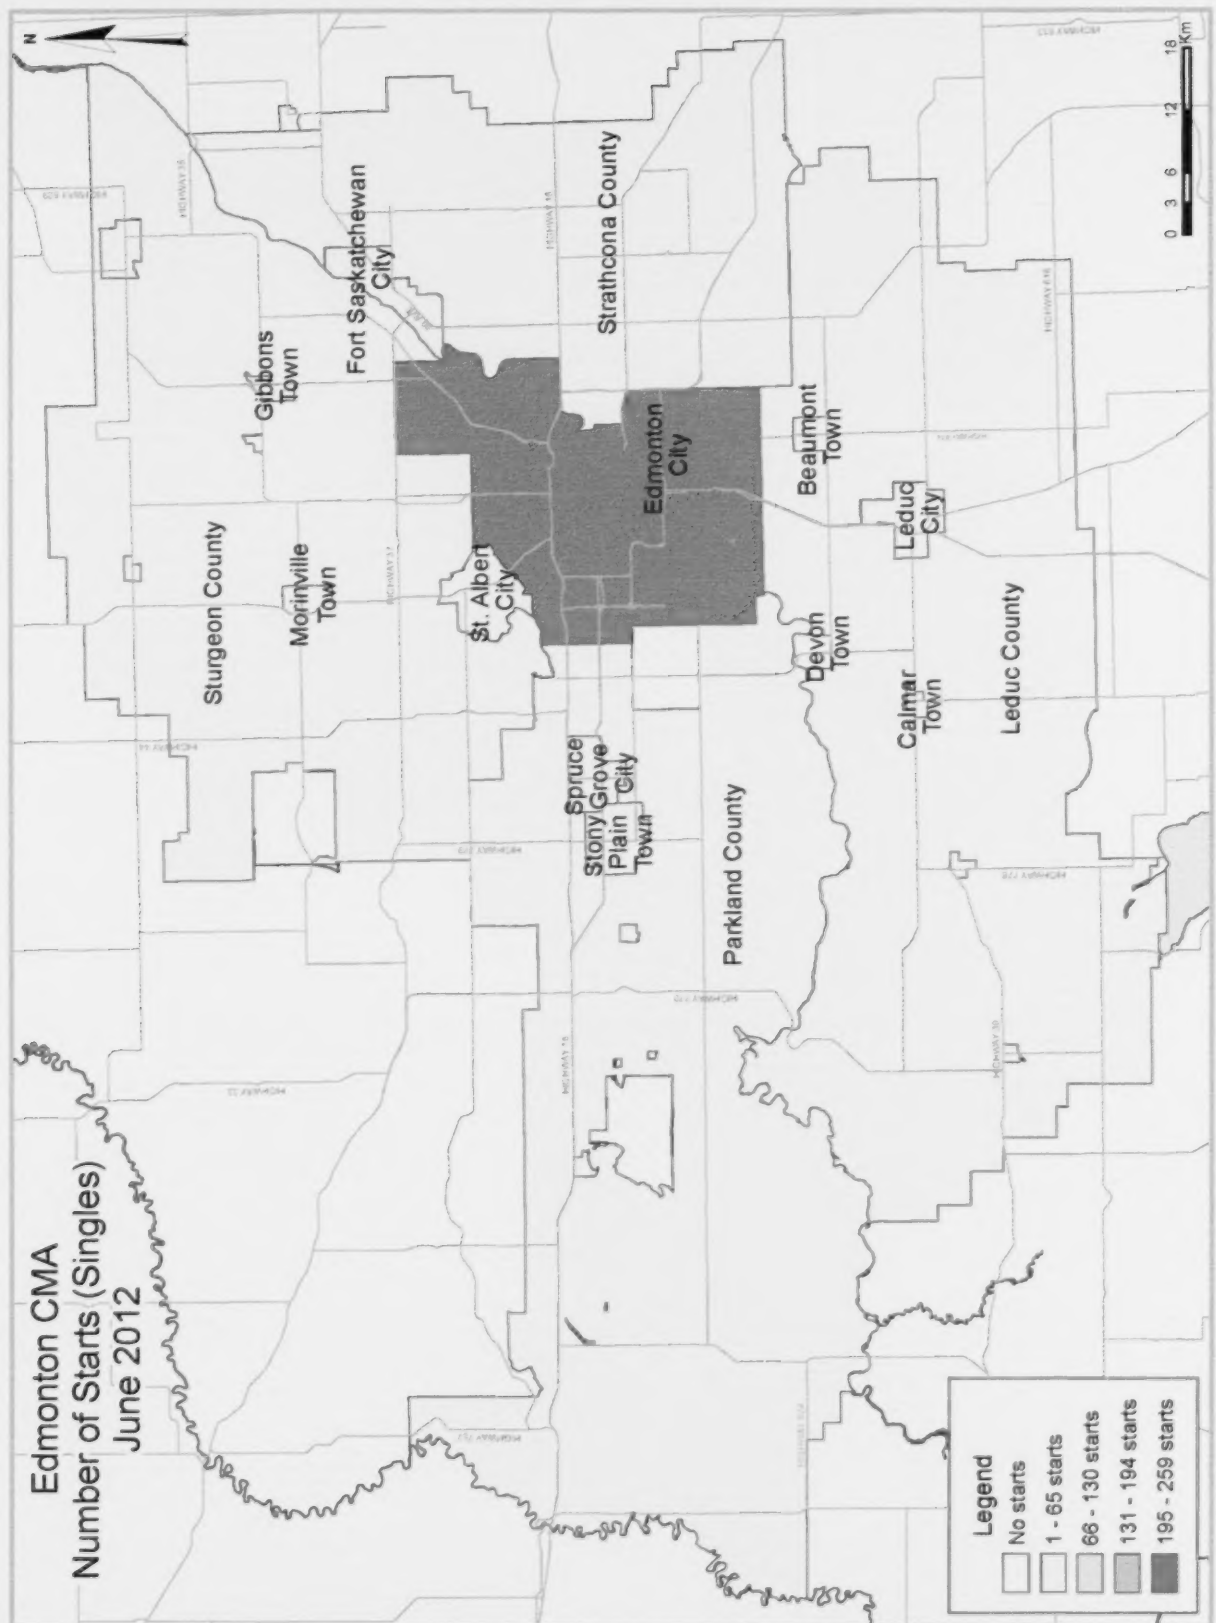

and part-time job creation, which contributed 13,600 and 15,300 jobs, respectively, over the previous year.

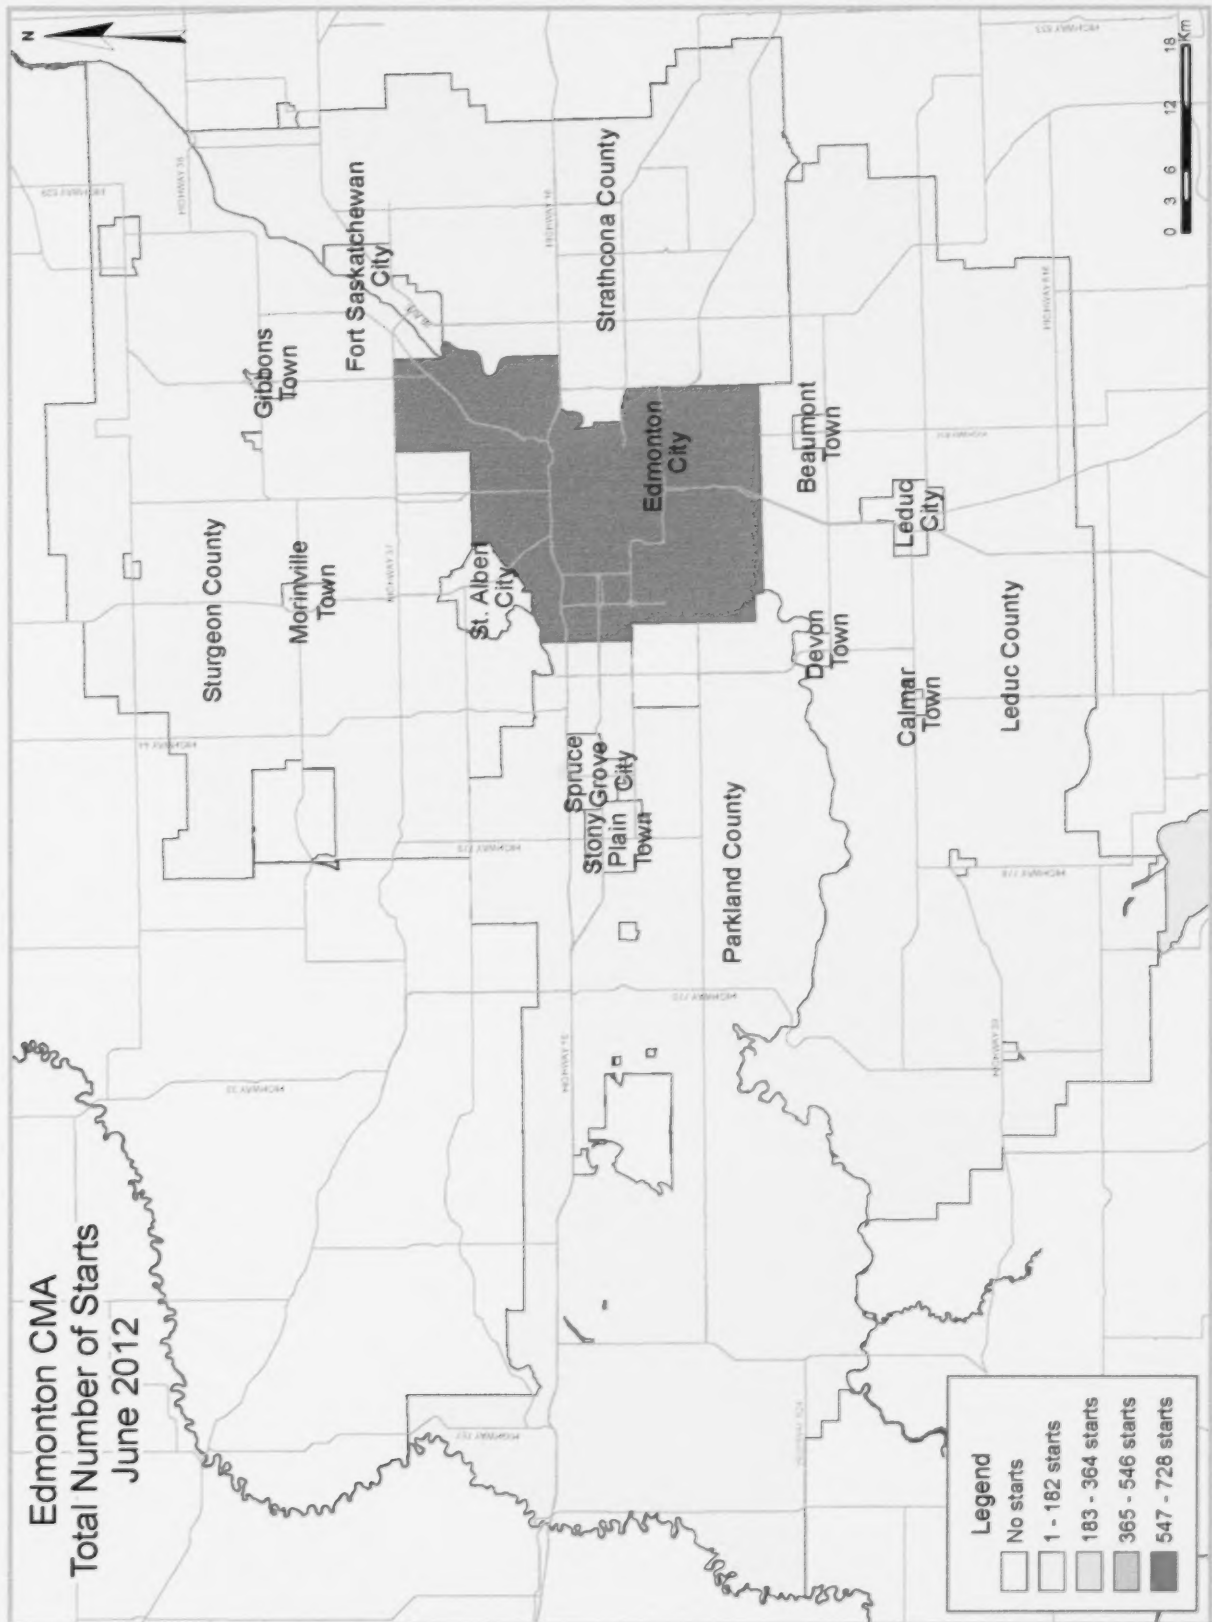

As employment expanded at a faster rate than the labour force, the unemployment rate in the Edmonton CMA declined. The seasonally adjusted unemployment rate moved down to 4.4 per cent in the second quarter of 2012 compared to the 5.7 per cent in the first quarter of the year.

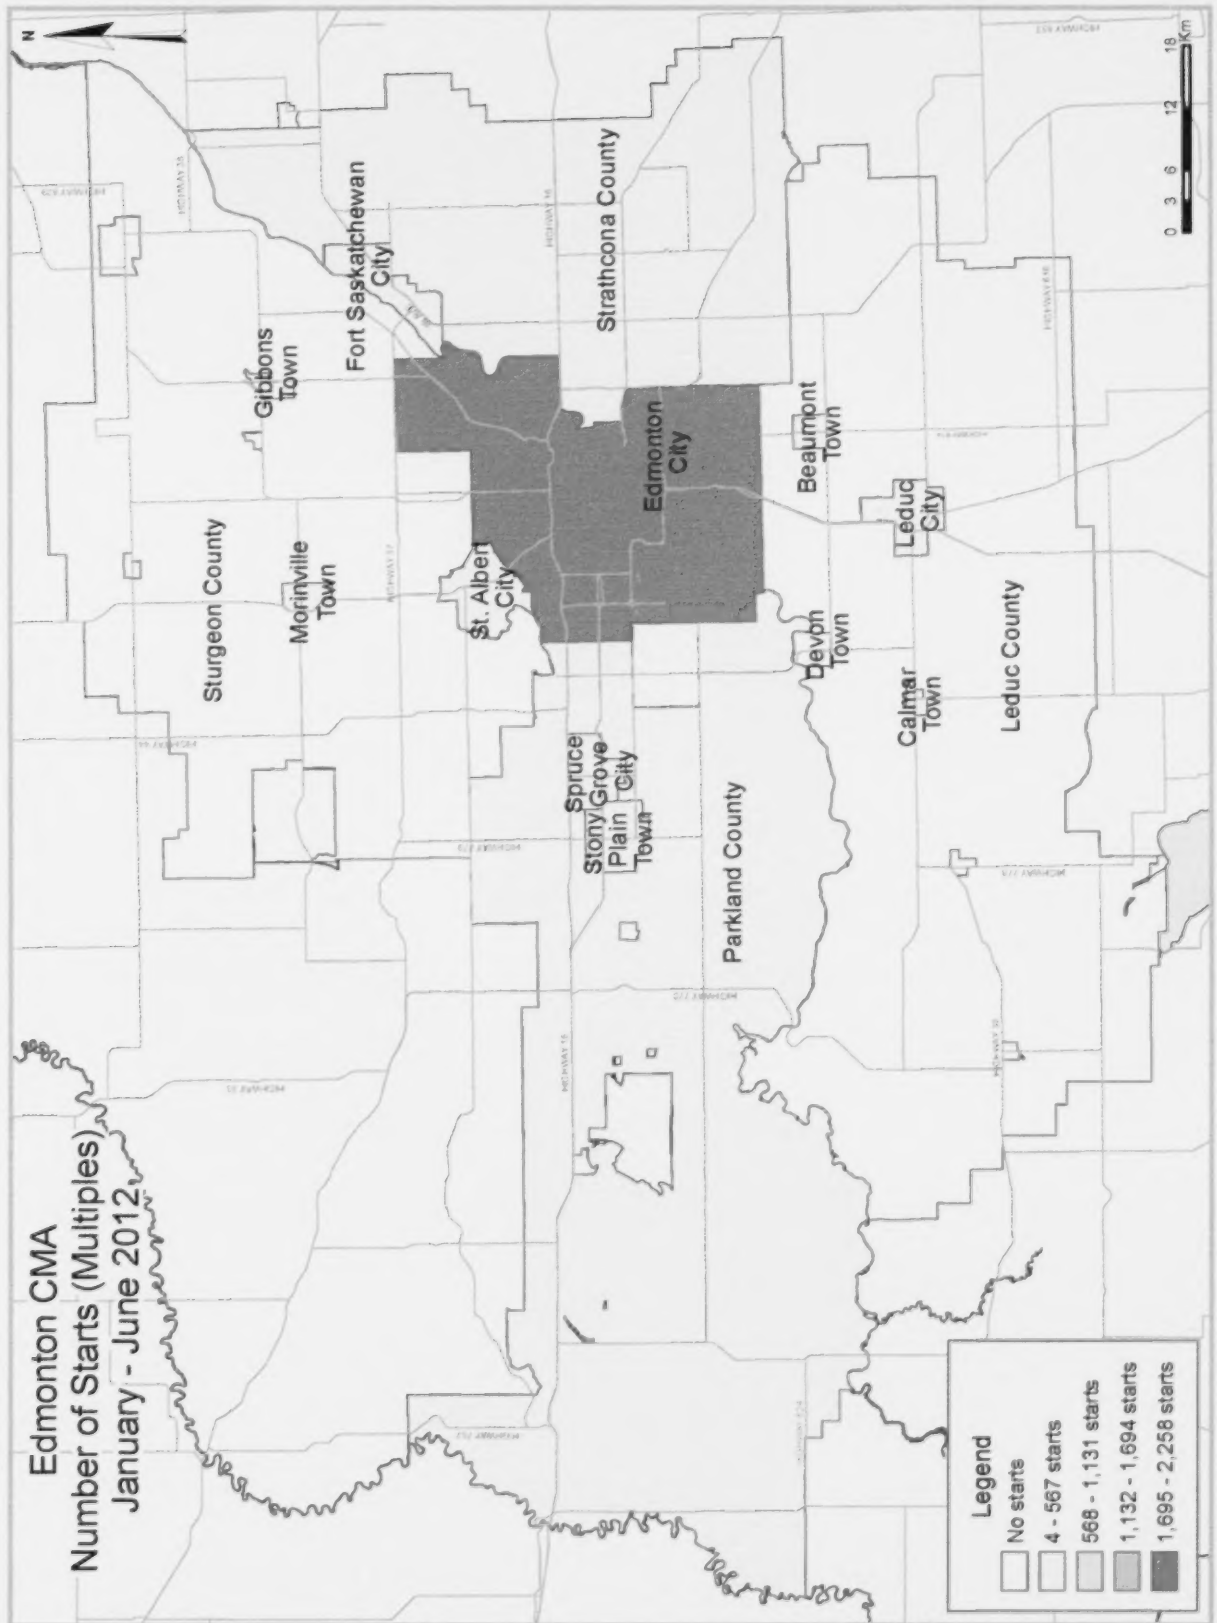

The need for labour to feed Alberta's expanding economy continued to draw migrants from other provinces and countries. According to Statistics Canada, net migration to Alberta jumped to 22,067 people in the first

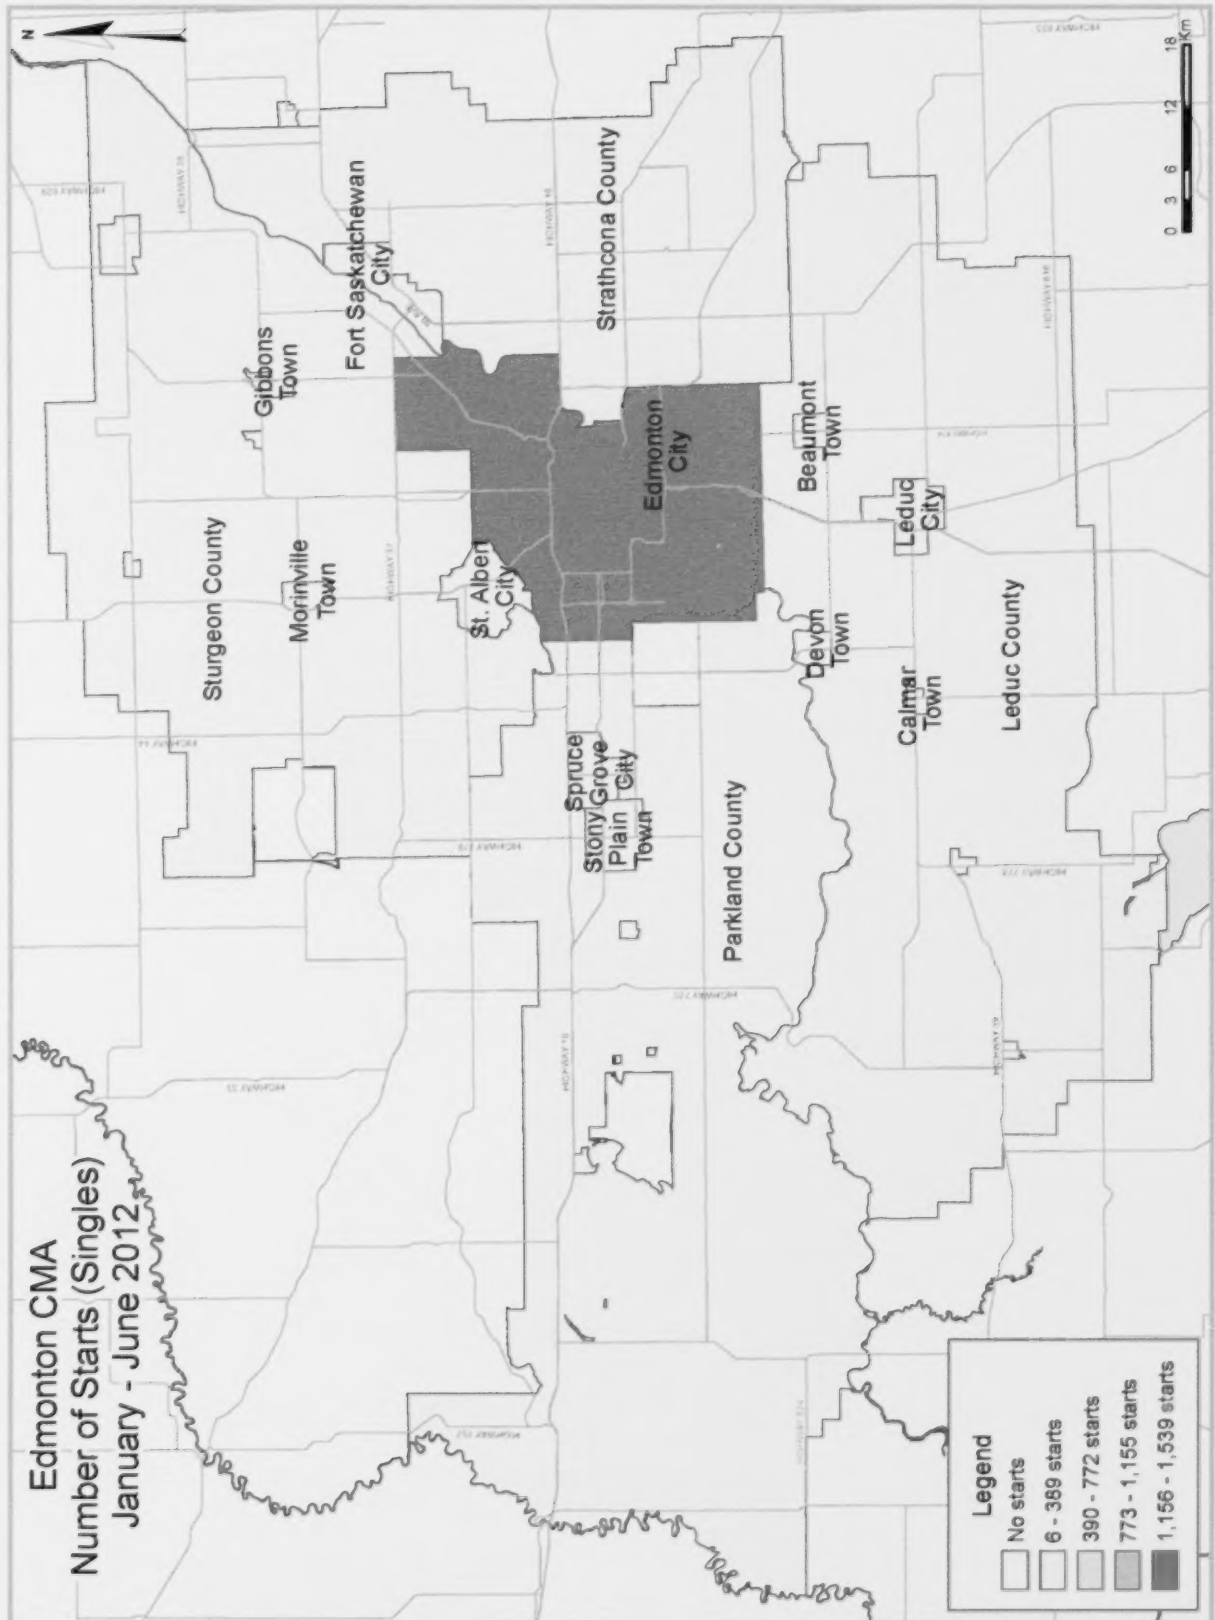

quarter of 2012, compared to the 8,983 in the same quarter in 2011. Net inter-provincial migration during the first quarter of 2012 was 13,396, up substantially from the 5,275 recorded in 2011. Alberta gained from every province, especially from the Atlantic Provinces and Ontario. The strong labour market also boosted the number of non-permanent residents coming to Alberta and contributed to the rise in net international migration in the first quarter of 2012. Net international migration, including non-permanent residents, reached 8,671 in the first quarter of 2012, more than double the 3,708 migrants in the first three months of 2011.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **"Single-Detached"** dwelling (also referred to as **"Single"**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **"Semi-Detached (Double)"** dwelling (also referred to as **"Semi"**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **"Row (Townhouse)"** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **"Apartment and other"** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **"intended market"** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **"Rural"** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
